

# Safety Without Sacrifice.

## Quality Without Compromise.

Anzen™ Safety Scalpel has a reusable stainless steel handle similar in weight and balance to traditional metal handle scalpels, providing surgeons and techs with necessary safety features without losing the familiarity, control and ease-of-use of their current scalpels.

- Weighted and balanced to provide instant familiarity, control and comfort
- Intuitive design provides effortless blade exposure
- Slim cartridge design does not interfere with view of incision site
- Single-use protected blade cartridge makes sharps injury prevention easy and convenient
- Protected blade stays retracted when attaching and detaching cartridges

## Simple to Use. Simple to Implement.

**Anzen decreases workplace injuries by creating safer operating rooms with fewer sharps incidents from scalpels.**

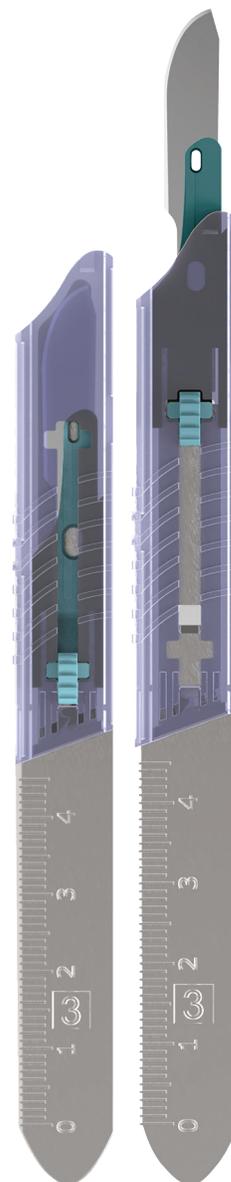

Anzen™ Safety Scalpel makes compliance with the Needlestick Safety Act effortless. By minimizing unnecessary exposure to the scalpel blade, you can ensure fewer preventable workplace injuries occur in the operating room and spend less time on the administrative pain following a sharps incident.

**FDA-listed CE-Marked**
